

Středa 3. 8. Z bivaku Tungnafell k chatě Nýidalur **(7. den pochodu, plán 25 km, 218 km celkem)**

Day 6: The Vonarskarð Pass lies between the glaciers Tungnafellsjökull and Köldukvíslarjökull. The geology is conditioned by the calderas on either side; geothermal activity is considerable since directly underneath the eastern caldera the Icelandic “Hot Spot” is to be found. We traverse the vast pass, over to the valley Snapadalur, where hot springs and solfataras are to be found, offering again a new set of colors. We have reached some rhyolite mountains, which unlike basaltic mountains, offer bright colors of great variety. After climbing a ridge of such mountains we descend along the valley Jökuldalur, at which end we find the huts of Nýidalur.

Distance: 28-32 km **Walking time:** 9-11 hrs
